

Adjustable Left-Hand Thumb Rest

- Supports the left thumb in a more natural and comfortable position.
- Enables more effortless and efficient operation of the octave key.
- Helps alleviate left hand strain.
- Promotes a more relaxed overall technique in the left hand.

- Easily customize the degree and direction of tilt to find the optimal position for you.

A new ergonomic innovation for saxophone

Hand position with flat stock thumb rest:

- Thumb is hyper-extended when releasing the octave key, causing strain in the left hand.
- Excessive motion required to transition between pressing and releasing the octave key.
- Contorted hand position conforming to the shape of the saxophone.

Hand position with the *INCLINE* thumb rest:

- Thumb does not need to bend backwards to be supported by thumb rest when octave key is not in use.
- Thumb is positioned for greater mechanical advantage, allowing for efficient technique.
- Natural, open hand position. The saxophone conforms to YOU.
